

Name: _____

Date: _____

Score: _____ / 40

LEVEL A • WORKSHEET

Worksheet: Sleep, Stress and Mental Health

Comprehension + Vocabulary Tasks — based on the article on sleep, stress and wellbeing

PART A — COMPREHENSION TASKS [20 marks]

A1

True / False / Not Given [7 marks — 1 mark each]

Do the statements below agree with the information in the article? Write:

TRUE — if the statement agrees with the information

FALSE — if the statement contradicts the information

NOT GIVEN — if there is no information about this in the article

1. The article says that sleep and stress management are more important than diet and exercise.

2. While you sleep, your brain processes information and your body repairs damaged cells.

3. The sleep cycle lasts approximately 90 minutes and repeats several times each night.

4. All types of stress are harmful to the body, according to the article.

5. Chronic stress permanently raises cortisol levels, which damages health over time.

6. The article states that resilience is an ability people are born with, not something that can be learned.

7. Studies show that even ten minutes of mindfulness practice per day can produce measurable benefits.

Note Completion [9 marks — 1 mark each]

Complete the notes below using **ONE WORD ONLY** from the article for each answer.

Sleep and the Body

8. The sleep cycle includes light sleep, _____ sleep, and REM sleep.

9. Poor sleep raises _____ — the body's primary stress hormone.

10. The hormone _____ is produced by the brain in darkness and helps regulate the sleep cycle.

11. Bright screens before bed suppress melatonin _____, making it harder to fall asleep.

Stress and the Mind

12. Short-term stress is described as a normal biological _____ that sharpens focus.

13. Chronic stress raises _____, which suppresses the immune system and raises blood pressure.

14. Burnout is described as a state of complete physical and emotional _____.

Mental Health

15. Resilience is the ability to _____ from setbacks and adapt to difficult circumstances.

16. _____ is the practice of paying attention to the present moment without judgement.

Short Answer Questions [4 marks — 1 mark each]

Answer these questions in your own words. Write *complete sentences*.

17. Why does the article say that stress is not always a bad thing?

18. According to the article, what happens when stress becomes chronic rather than short-term?

19. How does the article describe the relationship between stress, sleep and mental health?

20. What does the article say about good mental health — is it simply the absence of illness?

B1**Vocabulary Matching [8 marks — 1 mark each]**

Match each word or phrase (1–8) to the correct definition (a–h).

1. sleep deprivation	a. the ability to recover from setbacks and adapt to difficult situations	Answer: _____
2. cortisol	b. a state of exhaustion from long-term overwork, with slow recovery	Answer: _____
3. melatonin	c. the practice of paying full attention to the present moment without judgement	Answer: _____
4. chronic stress	d. the condition of getting significantly less sleep than the body needs	Answer: _____
5. resilience	e. the body's primary stress hormone, raised by poor sleep and pressure	Answer: _____
6. cognitive function	f. stress that is constant and long-term, never fully resolved	Answer: _____
7. burnout	g. a hormone produced in darkness that regulates the sleep cycle	Answer: _____
8. mindfulness	h. mental processes such as thinking, memory, concentration and decision-making	Answer: _____

B2**Gap-Fill [12 marks — 1 mark per gap]**

Complete the sentences using words from the word bank. Some sentences need more than one answer.

WORD BANK

sleep deprivation	cortisol	melatonin	mental health
anxiety	depression	chronic stress	resilience
sleep cycle	deep sleep	cognitive function	fatigue
insomnia	mindfulness	blood pressure	burnout
sleep hygiene	hormones	wellbeing	self-care

9

The _____ lasts approximately 90 minutes and includes stages of light sleep, _____, and REM sleep — each of which plays a different role in physical and mental recovery.

10

Even a single night of poor sleep raises _____ and increases feelings of _____, making it much harder to manage difficult situations calmly.

11

The hormone _____ is produced by the brain in response to darkness; screens before bed suppress its production and are one of the most common causes of _____.

12	People who experience _____ — constant, unresolved pressure — are at much higher risk of _____, heart disease, and _____.
13	Chronic stress raises _____, which can cause serious long-term damage including suppression of the immune system and increased _____.
14	Even experienced professionals can suffer from _____ — complete exhaustion from overwork — and recovery can take many months.
15	Good _____ — such as keeping a consistent bedtime and avoiding caffeine in the evening — has a measurable effect on sleep quality and daytime _____.
16	_____ is not simply the absence of illness; it requires daily investment, just like physical health, and includes managing stress, sleep and _____.
17	Practising _____ — paying attention to the present moment without judgement — builds _____ and reduces the impact of difficult events on mood and _____.
